ABOUT VAITA

Outlook Duplicate Items Remover 1.4.4

Free, Fast and easy tool for removing duplicate items from Outlook folders

With ODIR it's a snap to clean your Outlook folders by removing all duplicates. ODIR removes duplicates from Contacts; Calendar; Tasks; Notes and Email folders.

Using ODIR is very easy: select a folder and click the button **Remove Duplicate Items**. ODIR scans the selected folder for duplicates and MOVES all duplicates found to a subfolder **ODIR_duplicate items.** ODIR recognizes an item as a duplicate if **all** of the following properties match those of another item in the same folder:
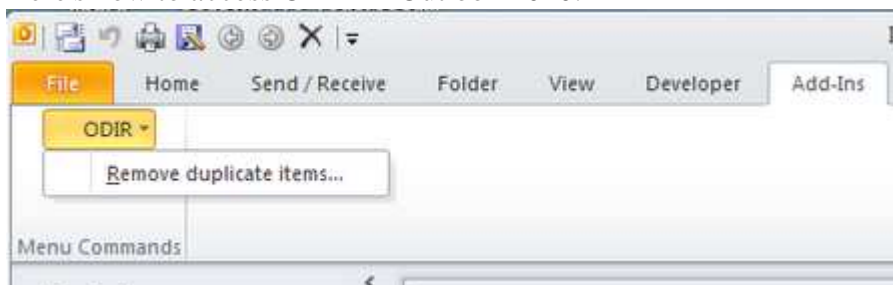

- **Contact** items:
  first name, last name, company name and **email address**

- **Appointment** items:
  subject, location, start date and **end date**

- **Task** items:
  subject, start date, due date and **status**

- **Note** items:
  contents of the note (Body property) and **color**

- **E-mail** or **Post** items:
  - received emails: the **internet message ID** (this is a unique identifier for each email received)
  - sent emails: email **subject** and the **time the email is sent**
  (PR_CLIENT_SUBMIT_TIME)
  - unsent emails: email **subject** only

ODIR 1.4 is FREE and doesn't contain Spyware or Ads!

Download Now

ODIR runs in all Outlook versions starting from Outlook 2000. ODIR does NOT run in 64 bit Office versions (no problem in Office 32 bit on Windows 64 bit).
Here's how to access ODIR in Outlook 2010:

Note for OsaSync users: removing duplicates is integrated in OsaSync so you don't need ODIR.

Technical support

In ODIR 1.4.3 this error is solved: error 13 type mismatch in findAppOnLogicalID. Due to this error no duplicates could be found in the Calendar folder.

Technical support is **not** available for ODIR because we offer ODIR free of charge. However ODIR problems are closely related to OsaSync issues so please check out the OsaSync technically support page. If ODIR doesn't start please follow the steps outlined in this support solution.
